

# FLY MORE – CRASH LESS

We can't guarantee that you will never crash your Draganflyer, but we can say with some **certainty** that you will get into the air, fly better and reduce your chances of crashing if you first practice using the enclosed flying simulator.

Spending an hour or two on the simulator will provide basic skills and will significantly reduce your learning curve when you take the Draganflyer for its first outing.

We know there is nothing more disappointing than to have something go wrong on a first flight that puts you in repair mode.

At the same time, we know having purchased a neat flying machine, you want to get it out of the box and FLY!

It's definitely a trade off. Hopefully, you will rely on our experience when we tell you that using the simulator program first will result in a better long-term experience with your new Draganflyer.

Sincerely,

The Draganfly Team
