

# \*\*\*\*\*Important Note\*\*\*\*\*

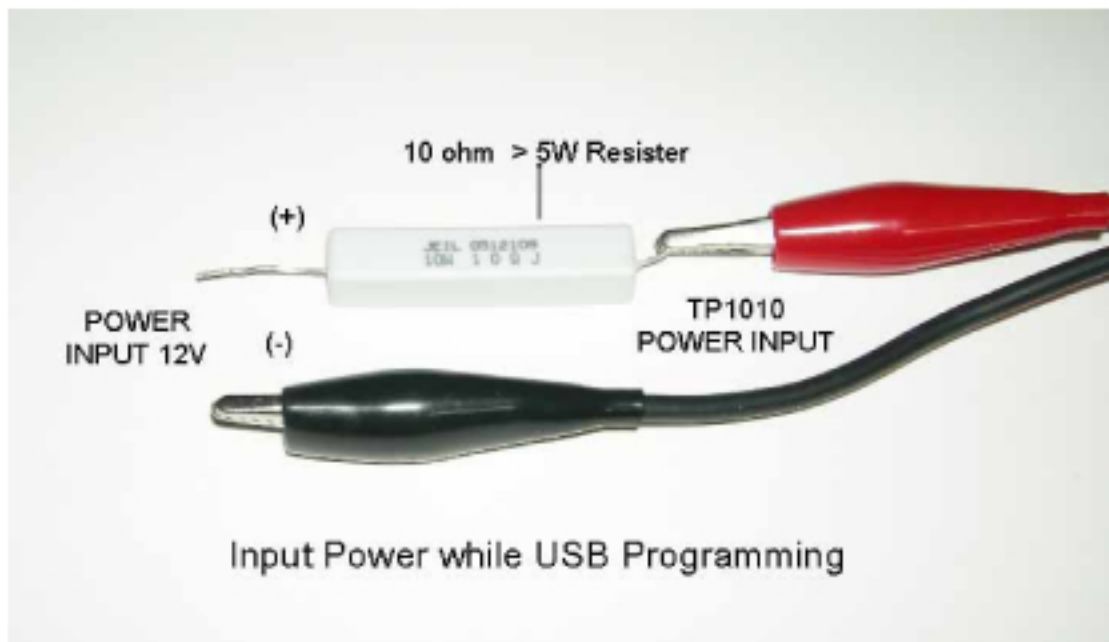

When upgrading firmware for TP1010C one of two options must be used

Options to use when performing upgrade ONLY:

1. Use 9V FC-1 battery for power supply

2. 10Ω ~ 15Ω resistor- available at electronics stores such as Radio Shack- part# 271-132. (TP will provide resistors free of charge when available sometime after July 15)

TP1010C will not be warranted if resistor or 9V FC-1 battery is not used
