

FOR IMMEDIATE RELEASE

The New Pinnacle of Performance – The World's Most Advanced, Most Powerful and Longest Lasting LiPo Batteries Yet!

Thunder Power RC introduces all-new Generation 6 (G6) Pro Power 65C series batteries capable of technology-leading charge rates up to 12C* and delivering up to 60% more power and 600+ cycles for high-power airplane, EDF, 3D helicopter and other demanding applications.

LAS VEGAS, NV. February 24, 2011 – In 2009 Thunder Power RC redefined the standards for LiPo battery power, longevity and fast charge rate capability with release of the world-renowned and award-winning G4 Pro Power 45C series batteries. Independent testers, sport and competition pilots alike proved they offered more reliability and power per weight than any other batteries in their class while delivering just as much power on the 300th+ cycle as they did on the 1st; even when charged at rates up to 6C every time. And while others are only now scratching the surface of these performance levels, Thunder Power RC is proud to take those industry-leading standards to a whole new level by offering the next pinnacle in performance, longevity and charge rate capability with all-new G6 Pro Power 65C series batteries.

Featuring exclusive Generation 6 chemistry, G6 Pro Power 65C series batteries offer a realm of power delivery, cycle life delivery and ultra-fast charge rate capability never before seen or experienced. Their ultra-low internal resistance (IR) results in the lowest possible operating temps for maximum cycle life and allows them to be charged at incredibly fast rates up to 12C* for charge times of as little as 5 minutes or less. They deliver continuous and burst power when and where it matters most in demanding applications, plus they're smaller in size and weigh less per capacity than other similar class batteries to offer the highest power to weight ratio at the lowest possible weight. So when your high-power airplane, EDF, 3D helicopter or other application deserves nothing but the best, G6 Pro Power 65C series batteries deliver up to 60% more power and up to 600+ cycles for the ultimate combination of performance and value unmatched in the industry today.

Available in capacities from 325mAh to 7700mAh and in configurations from 1S 3.7V to 10S 37.07V, there's a G6 Pro Power 65C series battery available for just about any application and at prices lower than the G4 Pro Power 45C batteries they replace. **Best of all Thunder Power RC batteries are backed by an industry-leading full 2-year warranty and 50% off damage replacement program coverage AND ARE STILL PROUDLY ASSEMBLED AND SUPPORTED IN THE USA!**

So if you've been searching for minimum charge times, maximum performance, cycle life and the very best value available today, look no further than Thunder Power RC G6 Pro Power 65C series batteries; **available now through the best retailers world-wide!**

The Thunder Power RC Exclusive G6 Chemistry Difference

Generation 6 (G6) chemistry delivers the lightest, most powerful, longest lasting and fastest charge rate capable LiPo batteries yet. G6 series batteries offer the highest energy and power density in high-discharge rate capable LiPo technology, weighing less and delivering up to 60% more power than previous and 100% more cycle life than recent generation LiPo batteries. That means more power at less weight for up to an incredible 600+ cycles while also being capable of technology-leading charge rates up to 12C* for charge times of as little as 5 minutes or less. This industry-leading performance and capability comes as a result of building G6 cells using the latest in high-quality Japanese-made materials with advanced technologies and optimized compositions not found in other cells. These technologies and materials, combined with the refined Premium Stack Technology (PST) construction, results in the lowest possible internal resistance (IR) and operating temps for maximum cycle life and the lowest cost per cycle.

About Thunder Power RC

Since 2003, Thunder Power RC has been the world-leader in the advancement of Lithium Polymer (LiPo) battery power and charging solutions for a wide variety of RC, UAV/UAS and other applications. Continuing to set industry-leading standards in performance and reliability is why more pilots, drivers and professionals world-wide choose Thunder Power RC LiPo batteries over any other brand.
